K-BINS

Picking Bin Storage

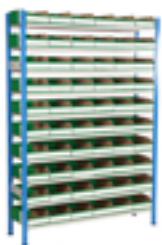

K-Bins are collapsible cardboard storage bins that are perfect for storing small parts and components.

The bins come flat-packed but are easily constructed by folding them into shape. With no tape or glue required, the bins can be assembled in seconds.

K Bins are available in a wide range of sizes, the most popular A-range bins are all 100mm high, if you need a little extra storage space, the B-range offers a box height of 200mm. For the full range of sizes please see our data tables below.

These cardboard picking bins are commonly used in warehouses and factories for storing nuts, bolts, screws, washers etc. but the boxes are so versatile that they can be used for other tasks such as storing small retail stock items in a stockroom or even for keeping office supplies neat and tidy.

Dedicated racking units are also available that are specifically designed to store cardboard bins for practical order picking storage.
