

Shoe Storage Design Guide

E-Z Rect specialises in providing storage solutions for retail stock rooms to achieve maximum stock density.

Back of house areas are a vital part of the store and a well designed stockroom reduces stock damage and 'over stocking' that is a common problem when merchandise can not be readily identified.

Utilise our free design service for an optimised stock room layout and calculation of stock capacity

The E-Z Rect team has a combined experience of over 50 years providing stock room solutions.

Our methodology is:

1. To understand your operation and to design the best solution for you
2. To fit in as much racking as possible, whilst allowing access.
3. To ensure that the racking installation is completed before the stock arrives!

Design Guide

- Use the full height available
- Slim shelves increase capacity
- Use the widest shelf possible
- Mobile shelving doubles capacity
- Double sided shelving is more economical

A good stockroom design requires balance between achieving sufficient stock density and enabling easy access.

Direct from the Manufacturer ~ Large Stocks ~ Low Prices ~ Great Service

EZR stock room solutions

Our system is very easy to assemble with independent shelf beams that support either chipboard, steel or mesh shelves.

A wide range of sizes ensures that there is no wasted space and our standard accessories, including rack end wipe boards, provide a user friendly environment.

Accessories

- Rack mounted folding tables
- Peg board end panels
- Plastic netting to retain stock
- Rack end wipe boards
- Garment rails
- Packing workstations
- Wire baskets
- Binning
